Join us for an exciting one hour AIA certified program presented by Tennessee Waterjet of Nashville, TN on waterjet technology and its application for architectural design.

The program is an introduction to waterjet as an element in design and will teach how this application has revolutionized designer's ability to creatively express themselves in an assortment of styles and textures. The program will step designers through the entire waterjet process, from conception of an artistic idea to creating precise drawings in CAD for manufacturing and installation of the resulting creation.

After the program, Louisville Tile's Architectural representative will share their experience in material selection for waterjets and provide information on how Louisville Tile has worked with designers and installers to produce eye-catching creations like the one shown above. You create the design and layout, and we'll do the rest!

Don't miss out on this opportunity to learn how you can take your next project to new levels of creativity and artistic expression. Contact your Louisville Tile Architectural Representative today for more details, and let us help you "Say It With Tile".
