

# LOUISVILLE TILE

## Grout Haze Removal – Cleanup Procedures for Post Installation

Porcelain, Ceramic, Glass. This product CANNOT be applied to acid sensitive stones (e.g. marble, limestone, travertine).

Use FilaCleaner Neutral Cleaner for acid sensitive stones

- Materials Needed: Deterdek, 2 Buckets, Synthetic Mop, Microfiber Cloths, White Scrubbing Pad, Floor Scrubbing Machine, Wet Vacuum, Blower/Fan
- Dilution: 1:5
- Distribute the chemical evenly across the surface of the tile.
- Dwell Time: 10-15 minutes
- Apply a little water and scrub vigorously using a floor scrubbing machine equipped with a scrubbing pad.
- Polished/Lappato: White or Red Pad (make sure you don't scratch the surface)
- Matte/Textured: Red or Blue Pad (Green or Black if the stain is stubborn)
- Remove the residue with a wet vacuum or a clean microfiber cloth.
- Thoroughly rinse the surface with a synthetic mop. Use one bucket to hold clean water and another bucket to strain dirty mop water.
- Dry the floor with a blower/fan

Caution: If you have a cementitious grout, do not leave undiluted Deterdek on the grout. Use water to wet the grout joints, use a 1:5 dilution. Use undiluted Deterdek only on the tile itself and rinse thoroughly. Do not leave a Deterdek residue on the surface, especially not on the grout lines.

*Grout Haze and Limescale Remover- Deterdek*
