Surface Solutions Since 1955

TILE CARE & MAINTENANCE TIPS

Always refer to manufacturers' guidelines regarding your materials. Keeping your tile clean and well-maintained doesn't have to be difficult. With a few simple care practices, you can ensure your tile looks as stunning as the day it was installed. Our knowledgeable staff is happy to answer any questions in additions to the tips listed below.

START WITH A
CLEAN SLATE

Remove dry debris using a broom or dry microfiber mop/cloth to prepare the surface for cleaning

CLEAN
WITH CARE

Use clean hot water, replacing frequently to avoid spreading dirt. For tougher cleaning jobs, opt for a ph neutral or mildly alkaline cleaner, such as FILA's CleanAll. Avoid cleaners like PineSol and Swiffer's Wet Jet solution, which leave a residue.

AVOID
HARSH CHEMICALS

Regular use of acidic (vinegar) or alkaline (bleach) cleaners can degrade sealer and damage your grout over time.

RINSE
FOR RADIANCE

Use clean water to rinse away any cleaner residue, keeping tiles bright and less prone to soiling.

CHOOSE THE
RIGHT TOOLS

Choose nylon or plastic scrubbers to clean without scratching tile or grout.
